SecurEnvoy

SecurAccess v6.2
Technical Product Sheet

VERSION 6.2

Key new functionality in this release:

✔ Automatic Group Deployment allows 100,000 users enabled and deployed within an hour

✔ Soft Token extended application available for:
➤ iPhone, Blackberry, Android and Windows 7 mobile
➤ PC Soft Token Microsoft XP, Vista, Windows 7, Windows Server 2003-2008

✔ Support for Google Authenticator software token

✔ Quick Response Code (QRcodes) for rapid user enrolment of Soft Token records

✔ User can switch between SMS, Soft Token and back to SMS as they switch phones

✔ Enrolment interface extended to support QRcodes for scanning with phone camera

Support for Soft Tokens

SecurEnvoy now provides soft tokens for your phone and P.C. to generate one time passcodes (OTP) for two-factor authentication that can be checked by your company's SecurEnvoy server. End-users have total flexibility with zero admin or overhead costs providing a mobile security solution to suit the user. Multiple soft tokens can be enrolled and used within the same app for multiple SecurEnvoy servers eliminating the need to carry multiple hardware tokens or install multiple soft token apps.

Soft Token application available

The latest SecurEnvoy server V6 allows users far greater choice of security - either tokenless SMS two factor authentication or a soft token downloaded as an application. Available free of charge to current customers, users can elect to use a soft token application from either SecurEnvoy or Google. Authentication soft tokens are suitable for most types of mobile devices i.e. iPhones, iPad's, Blackberry's, Android phones, Mac and Windows operating systems including Vista and Windows 7. P.C. Soft tokens are available for Windows XP, Vista, 7, 2003 and 2008 server.

Multiple soft tokens can be enrolled and used within the same app for multiple SecurEnvoy servers eliminating the need to carry multiple hardware tokens or install multiple soft token apps.

Automatic Group Deployment

SecurEnvoy now has the ability to deploy in excess of 100,100 users per hour with the advent of the "Automatic Group Deployment". An LDAP group is monitored and then automatically deploys and enables users to use SecurEnvoy 2FA.

Support for Google Authenticator

SecurEnvoy soft tokens for your phone or desktop can be used to generate one time passcode (OTP) for two factor authentication that can be checked by your companies SecurEnvoy server or Google's cloud login.
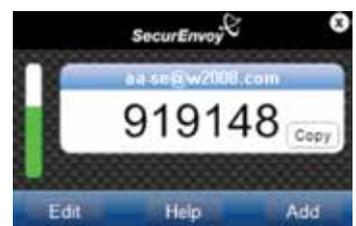

Quick Response codes

Quick Response codes are an excellent method to display a bar code matrix for the deployment of the "seed record" for the end users Soft Token. The user only has to scan the QR code with their phones camera to ensure a fully automatic enrolment process to a Soft Token.

P.C. Soft Token Interface

End user convenience of enrolment

Users who wish to use a P.C. Soft Token are automatically enrolled after successful authentication via the P.C. soft token agent. The "seed record" is then seamlessly deployed to the end user.
