Secur*Access* *v8.1*

The eighth version of SecurAccess takes our industry-leading mobile, two-factor authentication platform and adds even easier authentication with Push based notifications
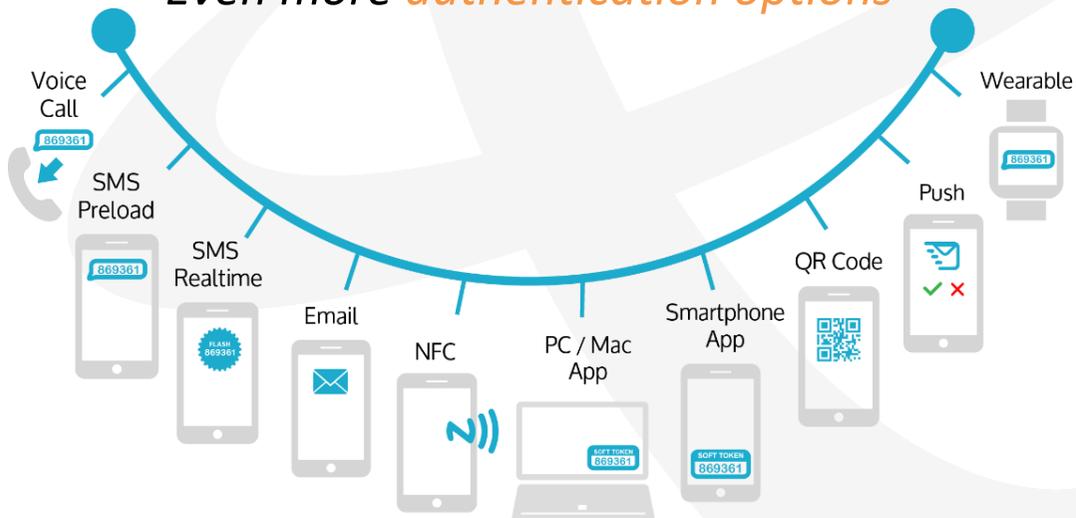

We've listened to the needs of end users and adapted to the ever-evolving nature of mobile communications to deliver our **most complete mobile authentication solution** yet.

Now, more than ever before, you can be confident that your **users can access the information they need wherever they are**, and no matter what device they're using, while maintaining the unbeatable security of SecurAccess two factor tokenless® authentication.

Now **compatible with the very latest devices**, from enabled Android and Windows mobile phones to the latest wearable devices and QR readers

But it's not just end-users who'll reap the benefits of SecurAccess V8. We've taken on board feedback from admins to make this latest version **even more versatile and easy to manage**.

Even more *authentication options*

Voice Call · SMS Preload · SMS Realtime · Email · NFC · PC / Mac App · Smartphone App · QR Code · Push · Wearable

New *functionality in V8.1*

Added User Functionality:

✓ **Support for 'push' notification within the app**

✓ **Support for push on 'Wearables' and all phones & tablets**

✓ **Customisable app settings to include your logo and colour**

✓ **SecurMail available to send from a browser and via a mobile app**

✓ **Option to protect Soft Token Phone App with Touch ID or Pin**

✓ **Tmp Passcode, new "Device Not Lost" mode to restore old token**

✓ **Seamless integration with smartphones enables phone password / biometric to become additional security level**

Technical Features:

✓ **Ability to notify end users via email if account disabled**

✓ **Customisable rules for cleaning up mobile numbers**

✓ **Support for nested groups on Microsoft AD systems included in Group Deploy**

✓ **Improved performance when using large numbers of multi-domains**

✓ **Simplified Radius GUI admin with names and copy button for easy reference**

✓ **Offline caching enables secure access via NFC or QR code even without internet access via device pin / touch ID**
