SalesForce SSO with Active Directory Federated Services (ADFS) v2.0

This document describes how to integrate SalesForce configured for SSO to a local ADFS 2.0 service with SecurEnvoy two-factor Authentication solution called 'SecurAccess'

SalesForce is a customer relationship management tool (CRM) that can be configured to use a local Active Directory Federation Service (ADFS) to enable local users to sign on with their existing AD credentials.

SecurAccess provides two-factor, strong authentication for remote Access solutions (such as SalesForce), without the complication of deploying hardware tokens or smartcards.

Two-Factor authentication is provided by the use of (your PIN and your Phone to receive the one time passcode)

SecurAccess is designed as an easy to deploy and use technology. It integrates directly into any LDAP server and negates the need for additional User Security databases. SecurAccess consists of two core elements: a Radius Server and Authentication server. The Authentication server is directly integrated with LDAP in real time.

SecurEnvoy Security Server can be configured in such a way that it can use the existing LDAP password. Utilizing the LDAP password as the PIN, allows the User to enter their UserID, Domain password and One Time Passcode received upon their mobile phone. This authentication request is passed via the Radius protocol to the SecurEnvoy Radius server where it carries out a Two-Factor authentication. It provides a seamless login into the Windows Server environment by entering three pieces of information. SecurEnvoy utilizes a web GUI for configuration. All notes within this integration guide refer to this type of approach.

The equipment used for the integration process is listed below:

SalesForce

SalesForce Cloud Account

Microsoft

Microsoft Server 2008 R2 with ADFS 2.0 Installed

SecurEnvoy

Microsoft Server (any version)

IIS installed with SSL certificate (required for management and remote administration)

Active Directory installed or connection to Active Directory via LDAP protocol.

SecurAccess software release v7.2.504

Index

1.0	Prerequisites	3
1.1	Configure ADFS and Salesforce	6
1.2	Testing ADFS and Salesforce	7
2.0	Configure IIS Agent for Default Website	6
2.1	Configure IIS Agent for ADFS	7
2.2	Configure logout URL	8
2.3	Configure Basic Authentication.....	8
3.0	Test the Two Factor Authentication	9
3.1	Successful Logon with 2FA.....	10
4.0	Notes	11

1.0 Prerequisites

SecurEnvoy Security Server has been installed with the Radius service and has a suitable account that has read and write privileges to the Active Directory. If firewalls are between the SecurEnvoy Security server, Active Directory servers, and the ADFS server(s), additional open ports will be required.

IIS Agent has been installed as per the SecurEnvoy IIS Agent Installation and Admin Guide: <https://www.securenvoy.com/integrationguides/iis%20agent%20installation%20guide.pdf>

The following table shows what token types are supported.

Token Type Supported	
Real Time SMS or Email	✓
Preload SMS or Email	✓
Soft Token Code	✓
Soft Token Next Code	✓
Voice Call	✓
One Swipe	✓

1.1 Configure ADFS and Salesforce

Install and configure ADFS using the following guide:

[http://technet.microsoft.com/en-us/library/dd807092\(v=ws.10\).aspx](http://technet.microsoft.com/en-us/library/dd807092(v=ws.10).aspx)

Go to Salesforce and navigate to the following:
Setup>Security Controls>Single Sign-On Settings

Provide the following:

Name
Issuer
Identity Provider Certificate
SAML Identity Type
SAML Identity Location
Identity Provider Login URL
API Name
Entity Id

SAML Single Sign-On Setting
[Back to Single Sign-On Settings](#)

SAML Single Sign-On Setting Detail			
Name	Value	API Name	ADFS
SAML Version	2.0	User Provisioning Enabled	<input type="checkbox"/>
Issuer	http://SalesForce.testlab.local/adfs/services/trust	Entity Id	https://SalesForce.testlab.local
Identity Provider Certificate	CN=ADFS Signing - SalesForce.testlab.local Expiration: 28 May 2015 11:23:01 GMT		
Signing Certificate	Default Certificate		
Assertion Decryption Certificate	Assertion not encrypted		
SAML Identity Type	Federation ID		
SAML Identity Location	Subject		
Identity Provider Login URL	https://SalesForce.testlab.local/adfs/		
Identity Provider Logout URL			
Custom Error URL			
Salesforce Login URL	https://login.salesforce.com/?sso=00D20000000N119		
OAuth 2.0 Token Endpoint	https://login.salesforce.com/services/oauth2/token?sso=00D20000000N119		

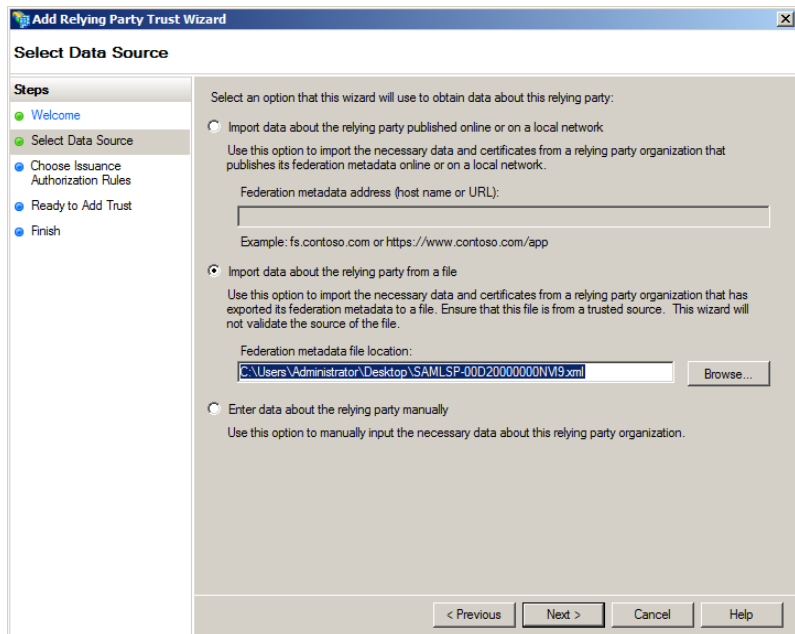

Save the settings and download the Metadata xml file

Open AD FS 2.0 Management and add a new "Relying Party Trust":

Select Data Source and select "Import data about the relying party from file"

Browse and select the Metadata xml file we exported from Salesforce previously.

Work through the wizard, entering "Display Name" and "Permit all users to access this relying party."

Note

Ensure you have "Open Edit Claims Rules Dialog" ticked within the final dialog

Within the "Edit Claim Rules Dialog select "Add Rule"
Enter the following:

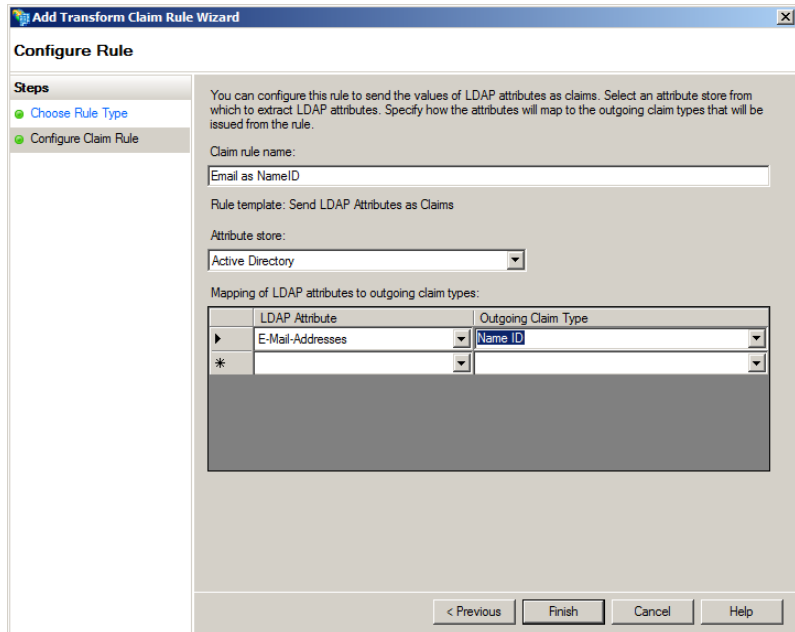

"Claim rule name"
Email as NameID

"Attribute store"
Active Directory

"LDAP Attribute"
E-Mail-Addresses

"Outgoing Claim Type"
Name ID

Click "Finish"

Add Transform Claim Rule Wizard

Configure Rule

Steps:

- Choose Rule Type
- Configure Claim Rule

You can configure this rule to send the values of LDAP attributes as claims. Select an attribute store from which to extract LDAP attributes. Specify how the attributes will map to the outgoing claim types that will be issued from the rule.

Claim rule name:
Email as NameID

Rule template: Send LDAP Attributes as Claims

Attribute store:
Active Directory

Mapping of LDAP attributes to outgoing claim types:

LDAP Attribute	Outgoing Claim Type
E-Mail-Addresses	Name ID
*	

< Previous Finish Cancel Help

1.2 Testing ADFS and Salesforce

Point your browser to your ADFS Idp-initiated logon URL and specify the loginToRp parameter as the Salesforce SAML entity ID:

E.g. <https://salesforce.testlab.local/adfs/ls/idpinitiatedsignon.aspx?loginToRp=https://salesforce.testlab.local>

This should redirect you and sign you into Salesforce. If you get a Salesforce login error, use the SAML assertion validator tool on the Salesforce single sign-on configuration page. It will display the results of the last failed SAML login.

SAML Single Sign-On Setting

[Back to Single Sign-On Settings](#)

SAML Single Sign-On Setting Detail

Edit Delete Clone Download Metadata **SAML Assertion Validator**

Name	ADFS
SAML Version	2.0

User Provisioning

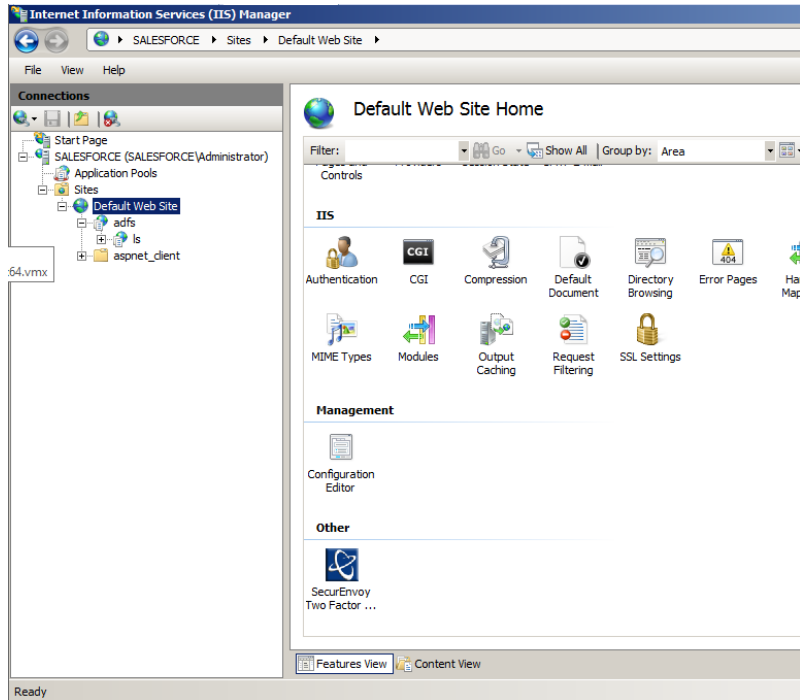

Note

If you get an error from ADFS, check the ADFS logs:
Server Manager\Diagnostics\Applications and Services Logs\ADFS 2.0\Admin.

2.0 Configure IIS Agent for Default Website

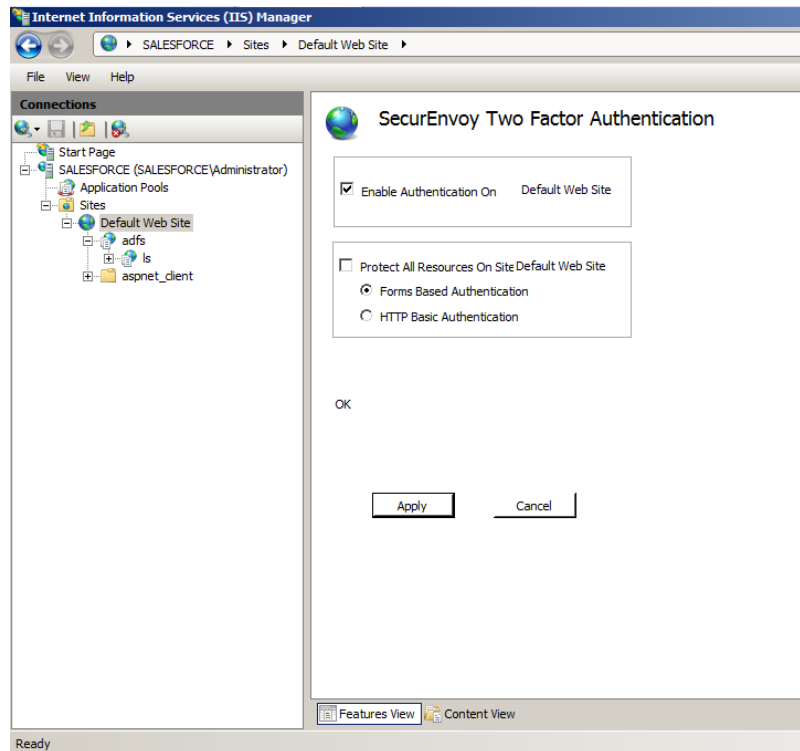

Launch the IIS management interface, either from "Start", "Administration Tools" or from the Server Manager

Expand the sites list on the navigation pane and select "Default Web Site", then scroll down the centre panel and press the "SecurEnvoy Two Factor" icon.

Enable the tick box to "Enable Authentication On Site Default Web Site"

Click "Apply" when complete.

2.1 Configure IIS Agent for ADFS

Under Default Web Site, expand adfs and select ls, scroll down the centre panel and select "SecurEnvoy Two Factor"

Select the check box "Enable Authentication On /ads/ls"
 Select "Form Based Authentication" (The Default)
 Click "Apply" to finish
 Cancel restart IIS when prompted.

Note

The virtual directory SecurEnvoyAuth MUST be a member of the ADFSAppPool

2.2 Configure logout URL

In the Navigation pane, select top level host name (the 2nd line down). Scroll down the centre panel and press the "SecurEnvoy Two Factor" icon. Setup your required inactivity timeout.

Add the logout URL **wsignoutcleanup**

Restart IIS when prompted.

2.3 Configure Basic Authentication

Navigate back to Default Web Site > adfs > Is and select the Authentication icon

Make sure that **only** Basic Authentication is Enabled

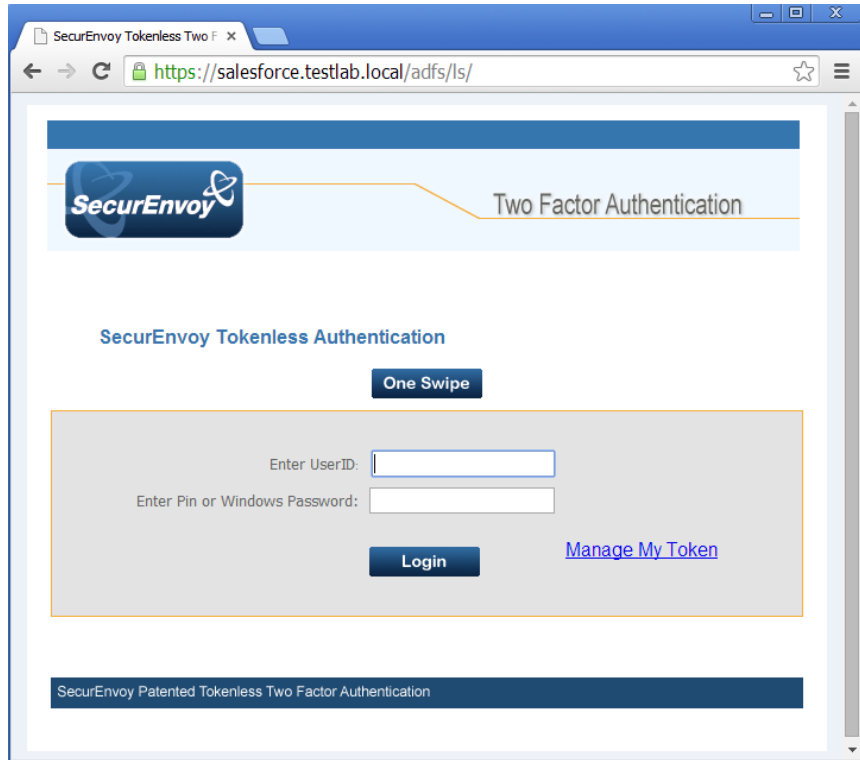

3.0 Test the Two Factor Authentication

Test the Two Factor Web authentication by opening a browser and going to the URL for the Web server i.e.

https://your_server_name/adfs/ls (Don't forget the https)

User logon screen is shown.

Enter your UsedID and Password:

User is then presented with their two factor authentication type:

- Pre load, Realtime and Soft tokens:

SecurEnvoy Tokenless Authentication

Enter Your 6 Digit Passcode

Login

- VOICE tokens:

SecurEnvoy Tokenless Authentication

Answer Phone, Passcode 794850, Then Login

Login

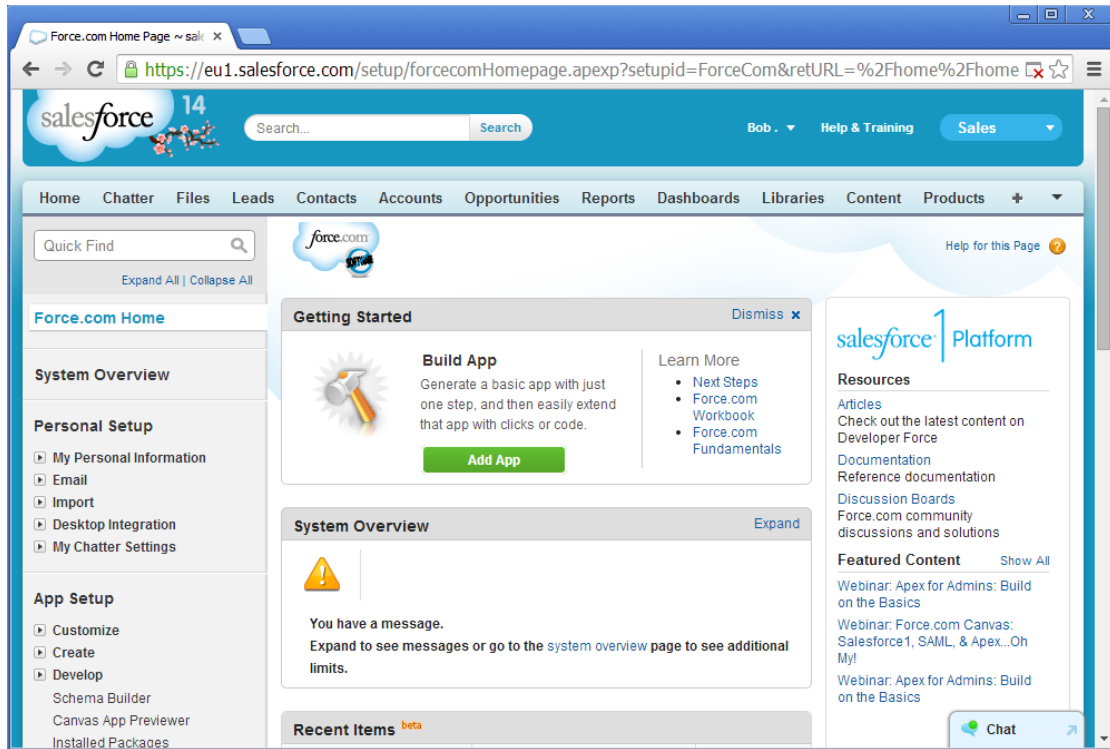

- One Swipe:

One-Swipe

3.1 Successful Logon with 2FA

User authenticates successfully and is presented with Salesforce:

Note

Configure your domain name within seiis.ini (C:\Windows):

Default Domain Name to use if no domain information is included in this UserID (leave blank if not required)

DefaultDomain="yourdomain"

This will allow your users to logon to Salesforce without specifying the domain name: domain\UserID

4.0 Notes
